

BIO 201 : Anatomy and Physiology I

Students will investigate the structure and function of the cell, the skeletal and neuromuscular systems, and the proprioceptive and reticular activating systems relative to sensation, perception, and movement.

Laboratory work will include experiments on animals and animal tissue and exercises with human subjects.

Credits 4

Corequisites

BIO 201L

Advising Note

Students who take this course cannot also receive credit for BIO 134 and BIO 213 due to overlap in course content.
